31 July 2021 12:01

The screenshot shows a Jupyter Notebook window with the URL `localhost:8888/notebooks/loop%20code.ipynb`. The notebook has a menu bar with File, Edit, View, Insert, Cell, Kernel, Widgets, and Help. The status bar indicates it is a trusted environment using Python 3. The code in the first cell is as follows:

```
In [1]: a=int(input("enter the number"))
if(a%2!=0):
    for i in range(1,21,1):
        print(str(a),"X" , i ,"=" , i*a)
else:
    print("enter the valid number")
```

The output of the code is a list of multiplication tables for odd numbers from 5 to 19, and a message for even numbers:

```
enter the number5
5 X 1 = 5
5 X 2 = 10
5 X 3 = 15
5 X 4 = 20
5 X 5 = 25
5 X 6 = 30
5 X 7 = 35
5 X 8 = 40
5 X 9 = 45
5 X 10 = 50
5 X 11 = 55
5 X 12 = 60
5 X 13 = 65
5 X 14 = 70
5 X 15 = 75
5 X 16 = 80
5 X 17 = 85
5 X 18 = 90
5 X 19 = 95
5 X 20 = 100
```

The screenshot shows a Jupyter Notebook window with the URL `localhost:8888/notebooks/loop%20code.ipynb`. The notebook has a menu bar with File, Edit, View, Insert, Cell, Kernel, Widgets, and Help. The status bar indicates it is a trusted environment using Python 3. The code in the first cell is as follows:

```
In [18]: for i in range(1,11,1):
print(i,"First ten even numbers are==",i*2)
```

The output of the code is a list of even numbers from 2 to 20, each preceded by its index:

```
1 First ten even numbers are== 2
2 First ten even numbers are== 4
3 First ten even numbers are== 6
4 First ten even numbers are== 8
5 First ten even numbers are== 10
6 First ten even numbers are== 12
7 First ten even numbers are== 14
8 First ten even numbers are== 16
9 First ten even numbers are== 18
10 First ten even numbers are== 20
```

The code in the second cell is as follows:

```
In [4]: a=50
for i in range(0,a+1,10):
    print("*****")
    print(i)
```

The output of the code is a series of asterisks followed by the numbers 0, 10, 20, 30, 40, and 50:

```
0
*****
10
*****
20
*****
